## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on **8/21/08** has been entered.

### ***Information Disclosure Statement***

The information disclosure statement filed 8/1/08 fails to comply with 37 CFR 1.98(a)(1), which requires the following: (1) a list of all patents, publications, applications, or other information submitted for consideration by the Office; (2) U.S. patents and U.S. patent application publications listed in a section separately from citations of other documents; (3) the application number of the application in which the information disclosure statement is being submitted on each page of the list; (4) a column that provides a blank space next to each document to be considered, for the examiner's initials; and (5) a heading that clearly indicates that the list is an information disclosure statement. The information disclosure statement has been placed in the application file, but the information referred to therein has not been considered.

### ***Allowable Subject Matter***

Claims 3-10 are allowed.

Regarding independent claims 3 and 9, the closest prior art to the instant invention is (JP 2-303707). '707 teaches a ball end mill which describe a semi-spherical-shaped locus during rotation of a tool body comprising: a cylindrical tool body which is to be rotated about an axis thereof, and a ball nosed end cutting edges including a first portion (3a, 3b) extending from said axis and a second portion (4a,4b) contiguous to said first portion, whereby both portions are located at a radially inner portion of the ball nosed cutting edges as seen in a distal end view (figures 1, 3 & 4 and abstract). '707 also teaches the first portion (3a,3b) being defined by a circular arc with a radius (R) which is convex in a direction of the rotation of said tool (figure 1).

However, '707 fails to anticipate or make obvious the second portion being defined by a circular arc which is convex with a second radius whereby the second radius is larger/different than the first radius. Furthermore, regarding claim 3, '707 fails to anticipate or make obvious a ratio of said radius to an outside diameter of the cylindrical body being in the range of 0.025- 0.10.
